

A quick & simple guide for enabling ITS OneLogin

Specs for Logo

- Size : Max 100kb
- Dimension : 256px X 256px
- DPI : 72px
- Background : Transparent background
- File Name : Logo_<Your SiteName>.png (without space's)
- File Type : .png only

Your Logo should be of the above specifications.

Specs for Description

- Content Size : Max 200 Characters'
- Language : English
- Encoding : Plain Text

The content of description should be according to the specifications.

Specs for Return URL

- URL of your website where user will be redirected after clicking on proceed button
- Full URL including http:// & https://
- Full URL including exact file name (E.g.: index.aspx, index.php, login.aspx)
- E.g.: <https://www.its52.com/login.aspx>

Your return URL should not be your Homepage URL. It should be a default page/ Index Page where the query string is decrypted & then it is redirected to your home page .

API Requirements

- Name : Name of domain or Idara (Name which need to be displayed at Homepage)
- Logo : Logo as per above specs
- Description : Description as per above specs
- Return URL : Return URL as per above specs
- Filter Criteria : Make it empty if for global or else write displaying criteria
- In-charge Details: ITS ID, Name, Mobile, Email

- Download Form & Fill-up: https://www.its52.com/public/OneLogin_APIForm.docx

All the above details have to be filled in the form.

Return Parameters

- All below parameters will be attached and return as an query string with your return URL
- All below parameters values will be encrypted while transforming from ITS server to your server, So you have to decrypt it before use at your end.

Parameter	:	User Details	-	Data Types
• ITSID	:	ITS ID of Mumin	-	numeric
• Name	:	Name of Mumin	-	String
• Gender	:	Gender (M / F)	-	String
• Age	:	Age	-	numeric
• Jamaat	:	Jamaat	-	String
• Jamiaat	:	Jamiaat	-	String
• Jamiaat ID	:	Jamiaat ID	-	numeric

These parameters will be returned in the query string along with a token. The data and token will be in the encrypted and comma separated format (csv).

Decrypt Function

- Download Decrypt Function: https://www.its52.com/public/OneLogin_DecryptFunction.zip
- Platform : Microsoft
- Language : Asp.Net
- Version : Support 2.0 & 4.0
- Function Name : OneLogin_Decrypt(PassKey,DataString)
- Return Value : String

The following file has the decryption function. First decrypt the encrypted token and match it with the original token. If the token matches , then decrypt the remaining data.

Web Service API :

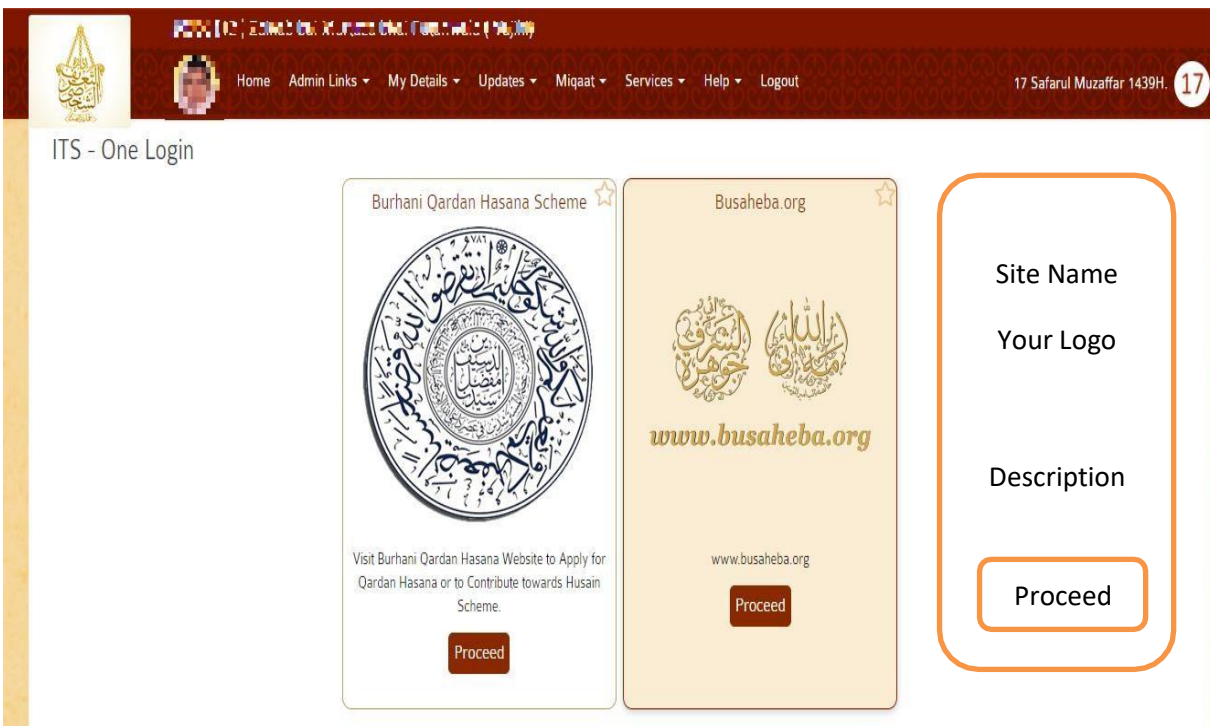

If you have any particular message to be displayed / shown to specific users , you can send us that message along with your webservice API.

One Login System - Example

Step 1 : Login to ITS52.com

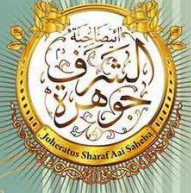

Step 2 : On the Homepage mumineen can see your idara's logo and description

Step 3 : Once Mumin clicks on Proceed button/ Logo of any particular website then mumin will be redirected to the respected websites homepage.

Eg . If mumin clicks on the proceed button of busaheba.org then mumin will be redirected to the homepage of busaheba.org

www.busaheba.org
